

# CLEAN & BRITE

*Maintenance Cleaner & Brightener for Outdoor Wood and Masonry*

## **Clean and brighten new wood siding, decks, and fences**

Just because your deck, siding, fencing, or log siding is newly built or installed doesn't mean the wood is clean enough to treat. Construction dust, spores, and even car exhaust has affected your wood. Try wiping it with a damp white towel you'll see how much dirt comes off!

Applying finish on top of dirt can result in disaster. This goes for wood that is already stained too but needs a re-coat. Fungi may grow and be trapped under the finish where you can't clean it off.

Clean & Brite eliminates this possibility by cleaning, brightening, and even removing tannin stains in preparation for treating or re-treating decks, wood siding, fences, or log homes.

## **Clean concrete, stone, and masonry surfaces**

Like outdoor wood surfaces, concrete walkways, patios, stonework, or driveways can become slippery, and dingy due to dirt and fungus. Clean & Brite does a great job of cleaning up masonry surfaces.

*Clean your stone and pathways too*

## **Clean and brighten your new log home before applying finishes**

A newly stacked log home is by no means clean after its been exposed to road pollution during transportation, settling dust and pollen during construction, and exposure to airborne mildew spores. Clean and brighten those logs before applying treatments to avoid trapping contaminants under the finish.

## **Use Clean & Brite as a yearly maintenance wash**

Log homes are more susceptible to dirt accumulation because the upper curve of the log is like a shelf where dust and spores collect. It's important to wash a log home every year to reduce dirt accumulation which can lead to the growth of mold. Cleaning your outdoor wood siding, deck, fence or log home just helps the finish last longer too.

## **Don't use bleach as a cleaner!**

Bleach is environmentally toxic, strips natural color from wood, and makes wood pulpy over time. Bleach also degrades and chemically compromises wood finishes. Clean & Brite, a citric acid based cleaner gets the job done without the negative repercussions of bleach.
